

Seeing the Light:
The Physics and Materials Science of the
Incandescent Light Bulb

February 20, 2002

Dr. Lawrence D. Woolf
General Atomics
San Diego, CA 92121

Table of Contents

<u>Section</u>	<u>Page</u>
Table of Contents -----	2
Correspondence to the National Science Education Standards ---	3
Correspondence to the Benchmarks for Science Literacy -----	5
Logical Construction of Module -----	8
Introduction and Basic Physics -----	9
Introduction to Filament Design Parameters -----	12
Experiment 1: The Room Temperature Filament -----	14
Resistance of Different Wattage Light Bulbs	
Experiment 2: The Temperature Dependence of the -----	17
Resistance of a 100 W Light Bulb	
Experiment 3: The Electrical Properties of 3-Way Bulbs -----	19
Experiment 4: Light Bulb Design -----	24
Experiment 5: Light Bulb Dissection -----	26
Experiment 6: Light Bulb Fabrication -----	28
Advanced Topic: Oxidation Resistant Materials -----	30
Advanced Topic: Blackbody Radiation -----	32
Advanced Topic: Filament Material -----	33
Advanced Topic: Filament Environment -----	35
Advanced Topic: Microscopic View of Incandescence -----	36
Advanced Topic: A Brief History: The Edisonian Approach -----	37
Problems -----	38
Solutions -----	39
References -----	44
Materials Required -----	45
